Professional Experience

Apsona, Associate Product Manager, Bangalore, India

(Jun'26-present)

- Architected an **AI-native outbound (GTM) engine** that shifts the SDR judgment-and-writing layer to the **Claude API**, orchestrating **8 external APIs** (Apollo, 6Sense, Apify, ZeroBounce, Instantly, PhantomBuster, Google Calendar, Salesforce) across a **15-stage pipeline**: intent detection, a **0–100 account scoring and A/B/C tiering** model, contact and email verification, personalized outreach, and **4-way reply classification**; designed for **2,000+ accounts/week** with idempotent CRM writes as the system of record.
- Built a **two-layer AI support-email triage system**: rule-based Salesforce Flow filters as a low-cost first pass plus a **Claude-powered decision step** for judgment cases (e.g., cold pitches with no keyword signature), grounded in a real inbox audit; routes only genuine product issues to the drafting agent, cutting non-issue mail before it reaches the agent and protecting the AI run budget.
- Drove hands-on prototyping of the agent stack: evaluated **orchestration approaches (Claude Code vs n8n)**, built the scoring logic and CRM dedupe rules in **Python**, designed a **managed Postgres state store** to track every prospect across the sequence at scale, and maintained a living **Whimsical workflow diagram** mapping each Salesforce write point to align Product, Engineering, and GTM.
- Defined the **v2 roadmap** for AI support automation: **confidence-gating** to suppress low-quality drafts, routing by product area and urgency, and a **keep/edit/discard feedback loop** to surface weak documentation areas.

Apsona, Product Intern, Bangalore, India

(May'25-May'26)

- Identified **\$12.26M upsell opportunity** by conducting **market research** and analyzing feature-level purchase behavior of **1,700+ accounts**; developed a bundled-pricing proposal of top **100 high-fit customers**, enabling **targeting 20+ clients**.
- Designed and developed an **AI Support Agent** using **Salesforce Agentforce** (Apex, LWC, Flows, Data Cloud), leading end-to-end **product development** and integrating **500+ PDFs/logs** to reduce case volume by 30% and improve first-response time by 25%.
- Performed deep-dive analysis of **CRUD activity data** across **1,700+ accounts**, generating user segmentation, feature adoption insights, and churn-risk alerts; discovered **3 core features driving 70% usage**, isolated friction points in onboarding.
- Engineered a **security & compliance framework** for **AgentExchange** with grounding, guardrail, and injection handling, aligned with **SOC 2, GDPR, and PDPA**; reduced clearance cycle time by **40%** and drove **program management** across Product, Security, and Engineering.

Abaj Frontendz Pvt. Ltd., Business Analyst

(Feb'21-Jun'24)

- Spearheaded development of **three internal analytics products: Project Delivery Tracker, Client Profitability Dashboard, and Resource Allocation System** by collaborating on system design, data-flow architecture, and backend API integrations. Deployed across **teams**, reducing manual reconciliation by **40%** and giving unified visibility into project performance and revenue drivers.
- Architected a **Power BI & SQL based data infrastructure** by designing ETL pipelines, relational schemas, scheduled refresh logic, and role-based access controls; optimized processing of **25K+ monthly records** and improved data latency from **7 days to 24 hours**, increasing reporting reliability for **Sales, Finance, and Operations** by 30%.
- Conducted analysis on **30,000+ multi-source datasets** (CRM, ERP, finance logs, project tools) using SQL, Python preprocessing scripts, and DAX measures; uncovered **top 3 customer segments contributing 68% of revenue**, surfaced high-leakage workflows, and drove changes that accelerated project initiation by **20%**.
- Worked cross-functionally with **Engineering, UX, Sales, and Finance** to convert business needs into functional specs; defined KPIs for SLA adherence, defect density, and utilization rates. Insights revealed **3 workflow bottlenecks causing 18% delays**, leading to redesigned approval flows and automated quality checks that boosted on-time delivery by **22%**.

Education

Indian Institute of Technology, Kanpur (IIT): Master of Business Administration (MBA)

(2024-26)

- CGPA: 8.61 / 10.00 | Concentration: Product Management & Business Analytics
- Coursework: Product Management, Business Analytics, Data Science, SQL, Machine Learning, Operations Strategy
- POR: Organizing Committee Member - *Udghosh 2024* (Managed event operations, stakeholder coordination, and student outreach)

Ahmedabad Institute of Technology, Gujarat: B.Tech in Mechanical Engineering

(2016-20)

- CGPA: 8.3
- Project: **Predictive Maintenance System**: Analyzed vibration and temperature datasets using regression techniques to forecast equipment failure patterns. **Process Optimization Study**: Conducted time-motion analysis across 3 manufacturing lines to reduce cycle time by 12%.

Skills

Product & Business: Product Management, PRD & User Stories, Roadmapping, A/B Testing, User Research, Market Analysis, KPI Definition, GTM Research, Agile/Scrum, Stakeholder Management

Data & Analytics: SQL, Power BI (DAX, Data Modeling), Tableau, Excel (Advanced), Python (Pandas, NumPy), ETL Pipelines, Dashboarding, Cohort Analysis, Funnel Metrics, Forecasting Models, Data Quality Frameworks

Software & Systems: REST APIs, Data Modeling, Workflow Automation, Salesforce (Apex, LWC, Flows, Data Cloud), Cloud Platforms (Azure/AWS basics), Version Control (Git), Software Requirements & Architecture Reviews

AI/ML & Tools: LLM Agents & Orchestration, Prompt Engineering, Regression Models, Classification Techniques, Predictive Analytics, LLM Grounding Concepts, Claude API, n8n, Jira, Notion, Figma (Wireframes), Power Automate
